

[Carbon Twelve \(C12\)](#) is a new node provider, formed by existing node provider Marc Johnson.

C12 aims to harness the power of the Internet Computer to forge a more sustainable future.

C12 will be taking over Marc's 1 active node in Paris, and will scale to 4 nodes in Paris, France, and 4 nodes in Barcelona, Spain.

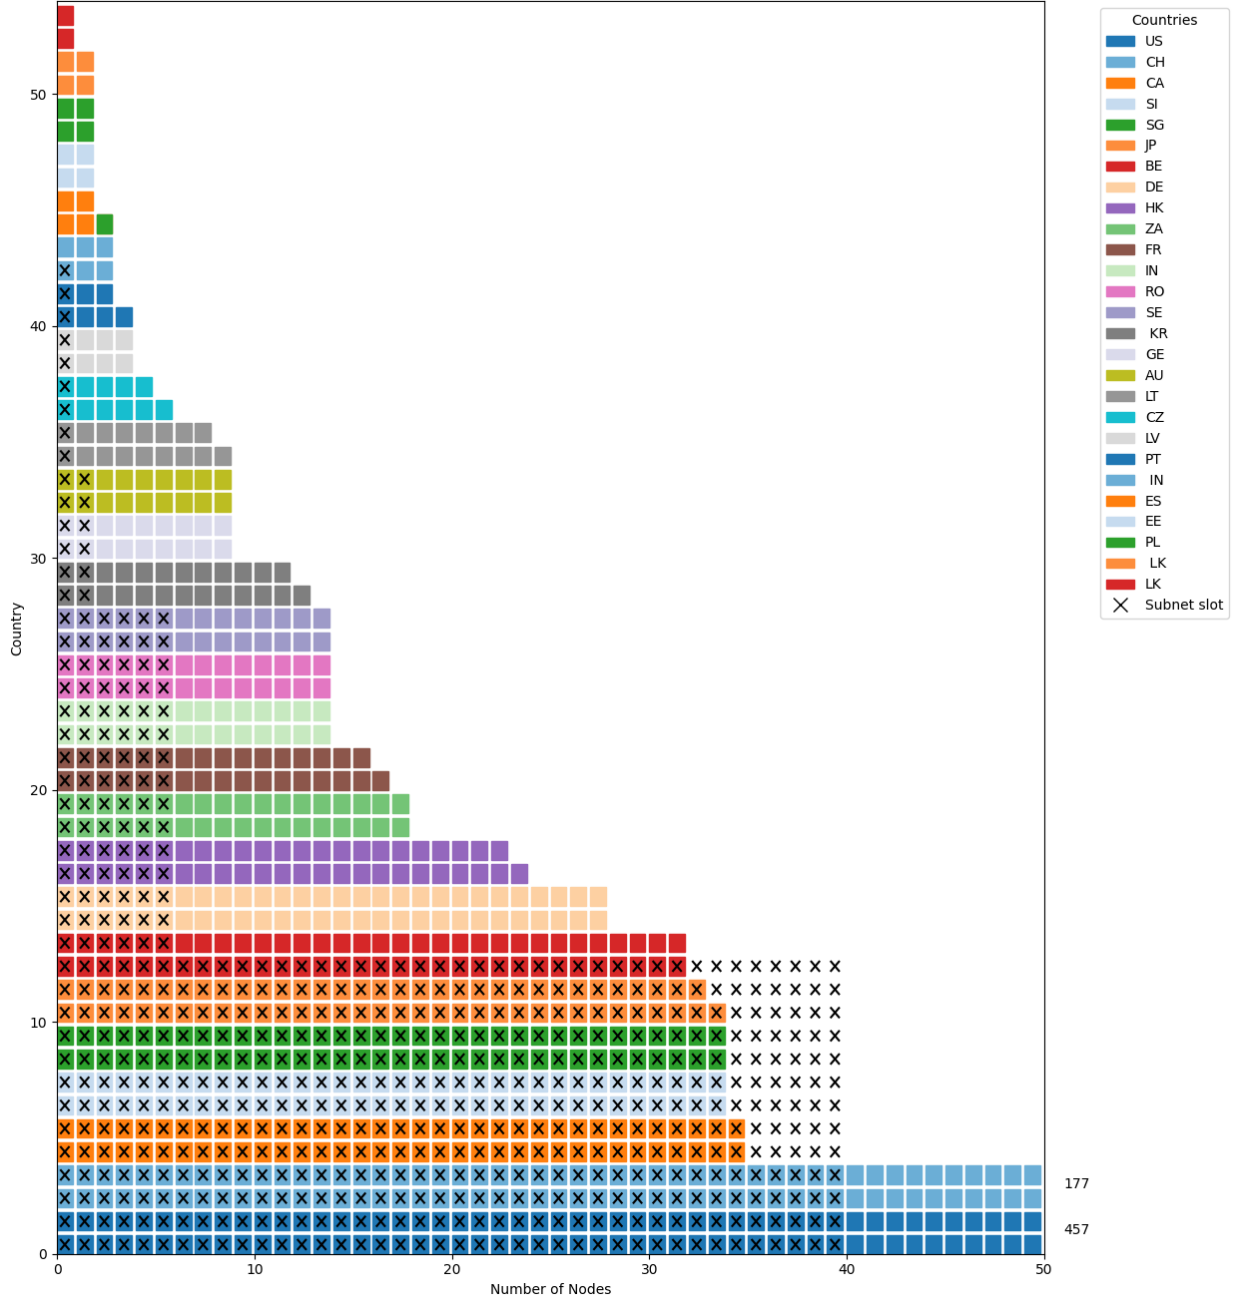

C12 has run the [topology_optimizer](#) to get the ObjectValue of the nodes we intend to onboard. The initial **ObjectiveValue was 20**, and below are the results and output graphs for the nodes we intend to onboard:

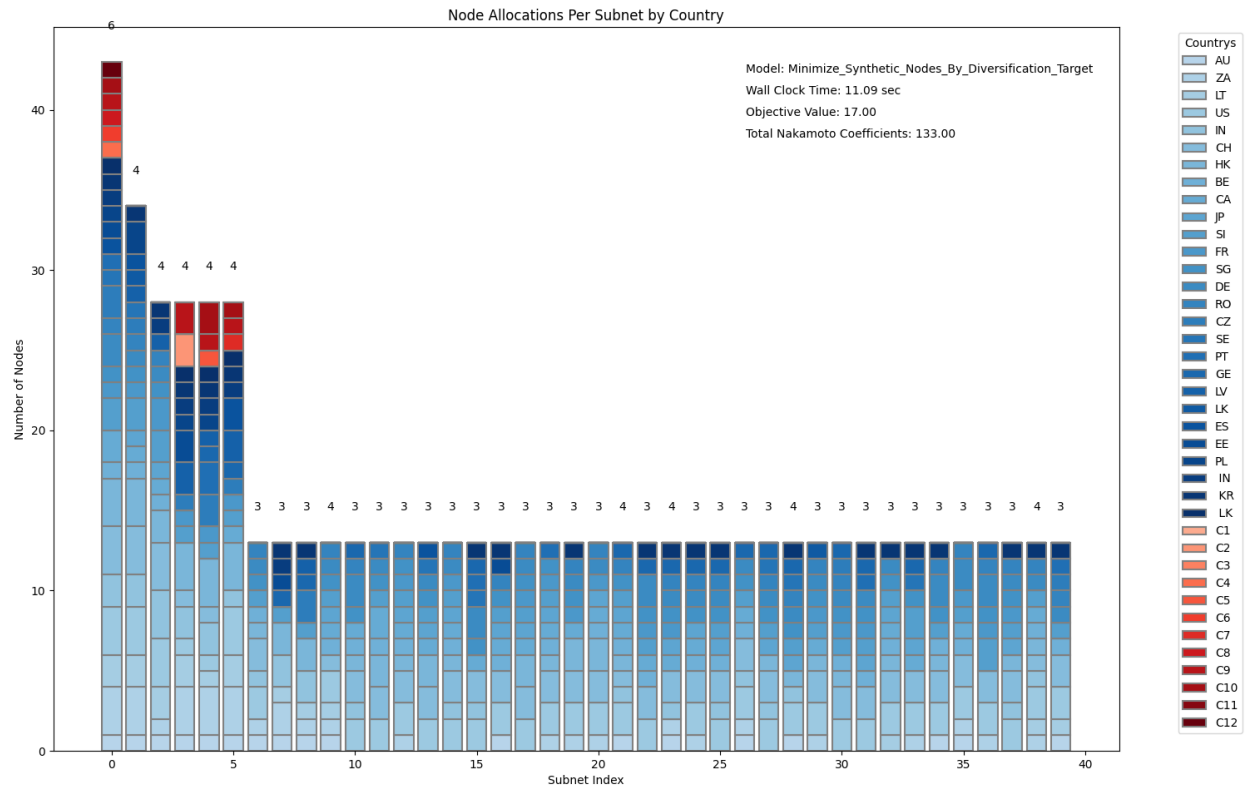

- **Paris:**

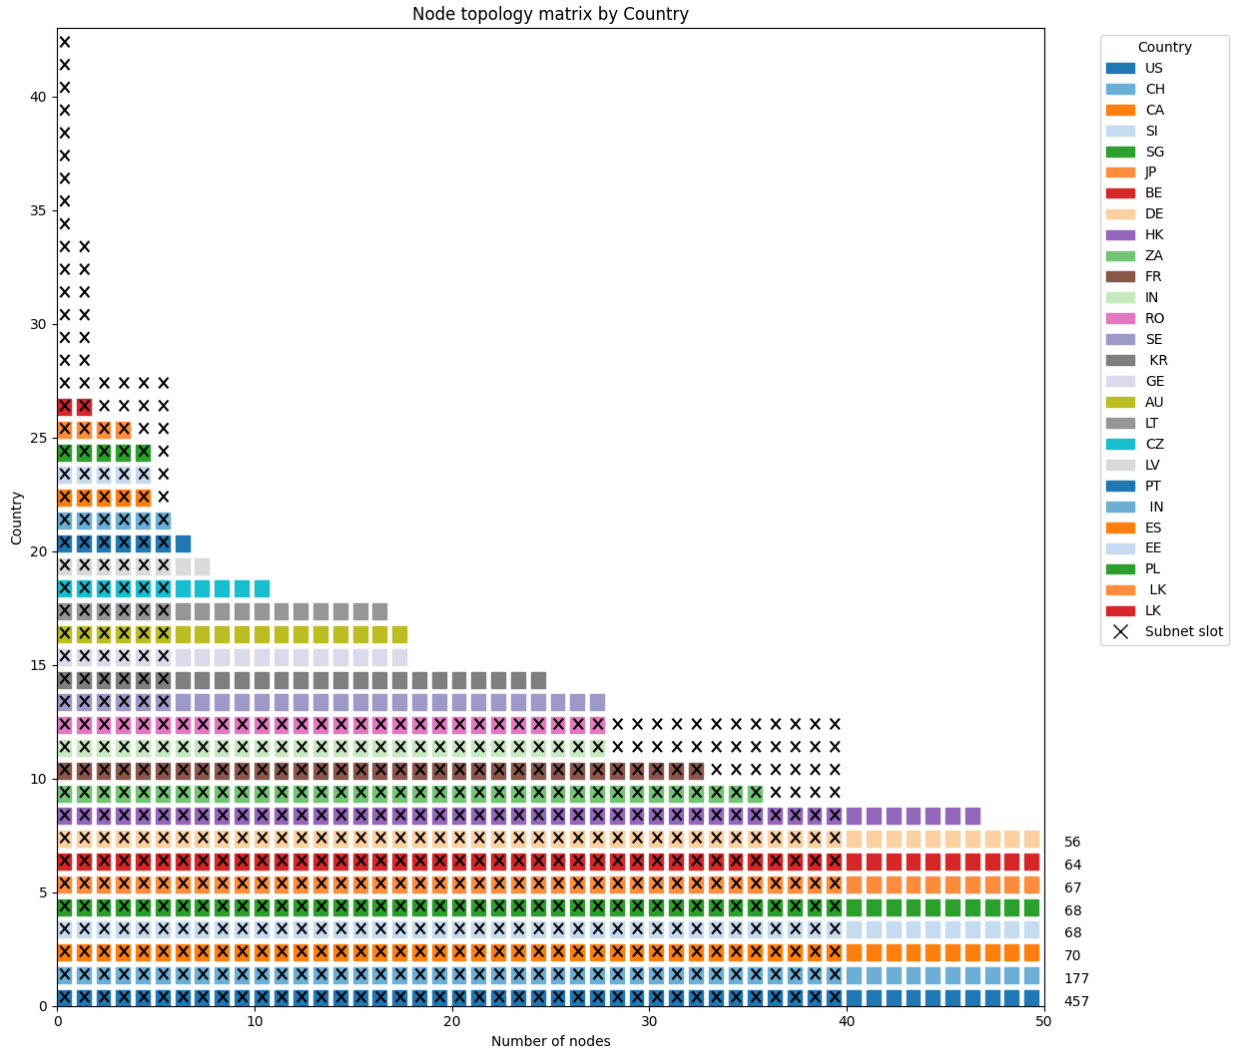

- Data center: Paris 1
- Owner: Celeste
- Nodes: 4
- ObjectiveValue: **17**

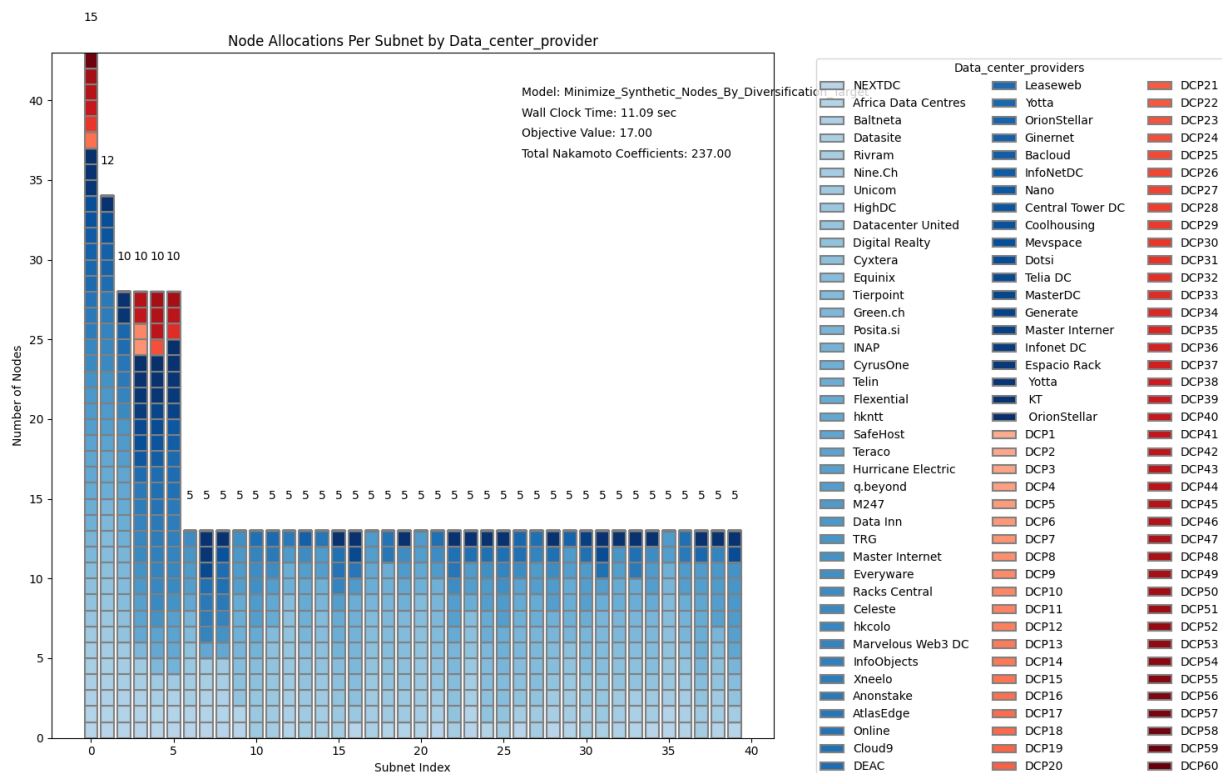

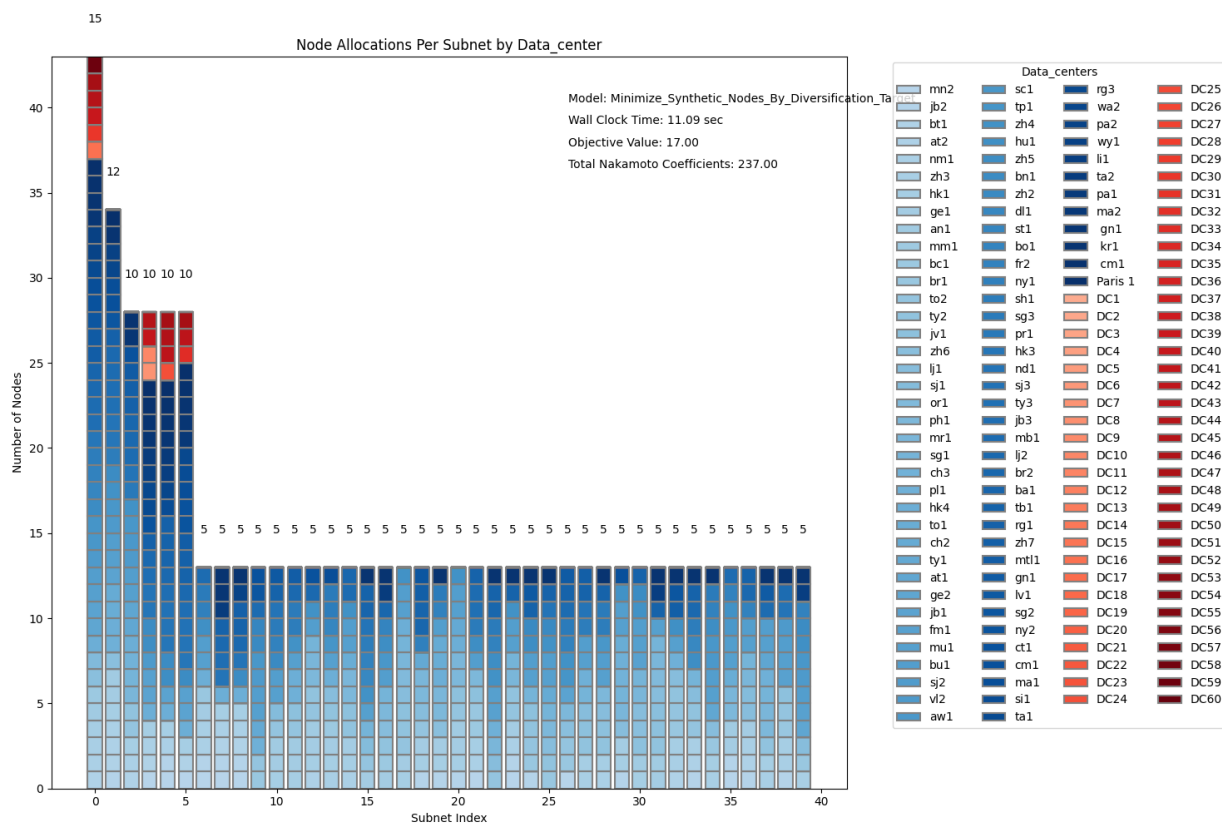

```
df_candidate_nodes = create_candidate_node_dataframe(node_provider  
='Carbon Twelve',data_center='Paris 1',data_center_provider  
='Celeste',country='FR',is_sev=True,no_nodes=4)
```

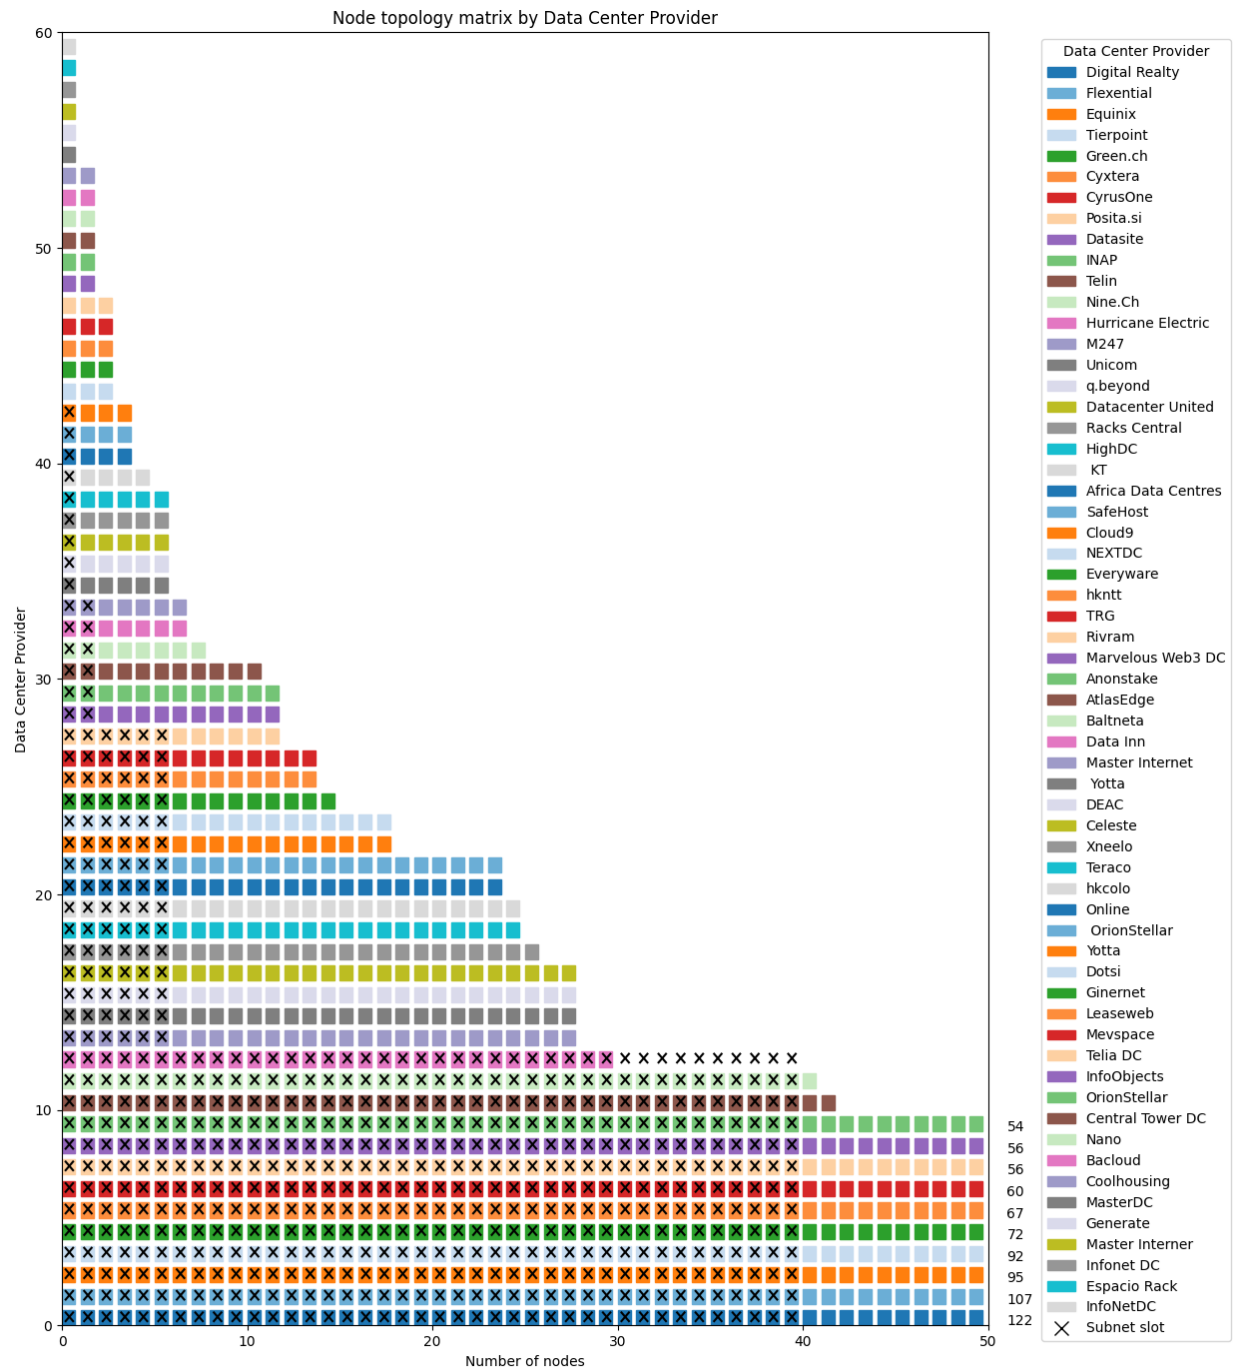

Node topology matrix by country

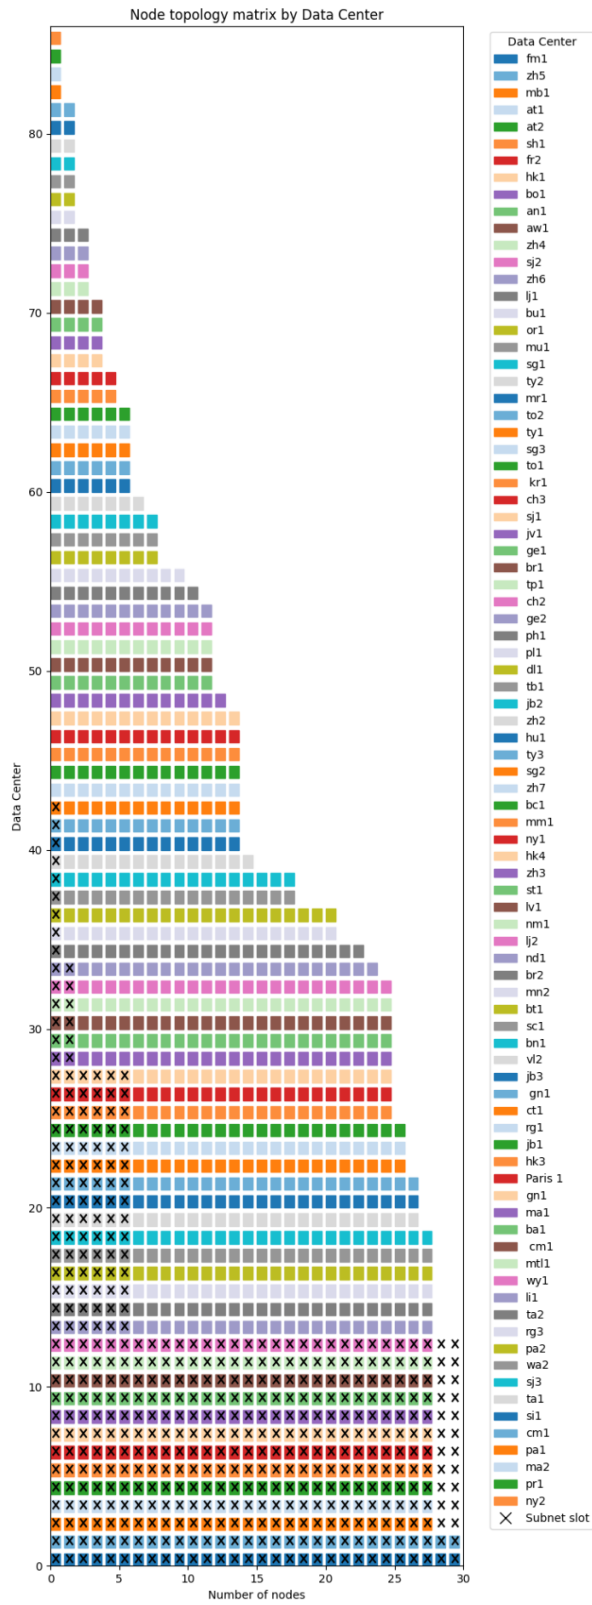

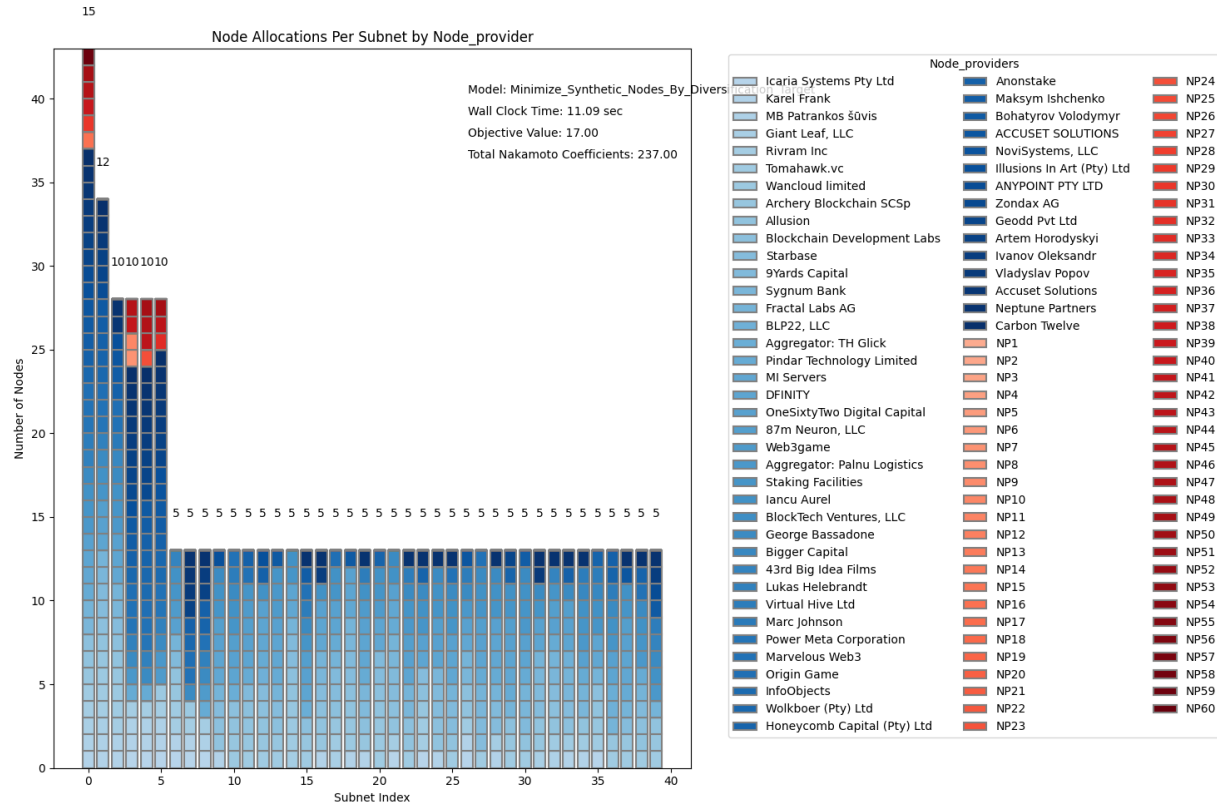

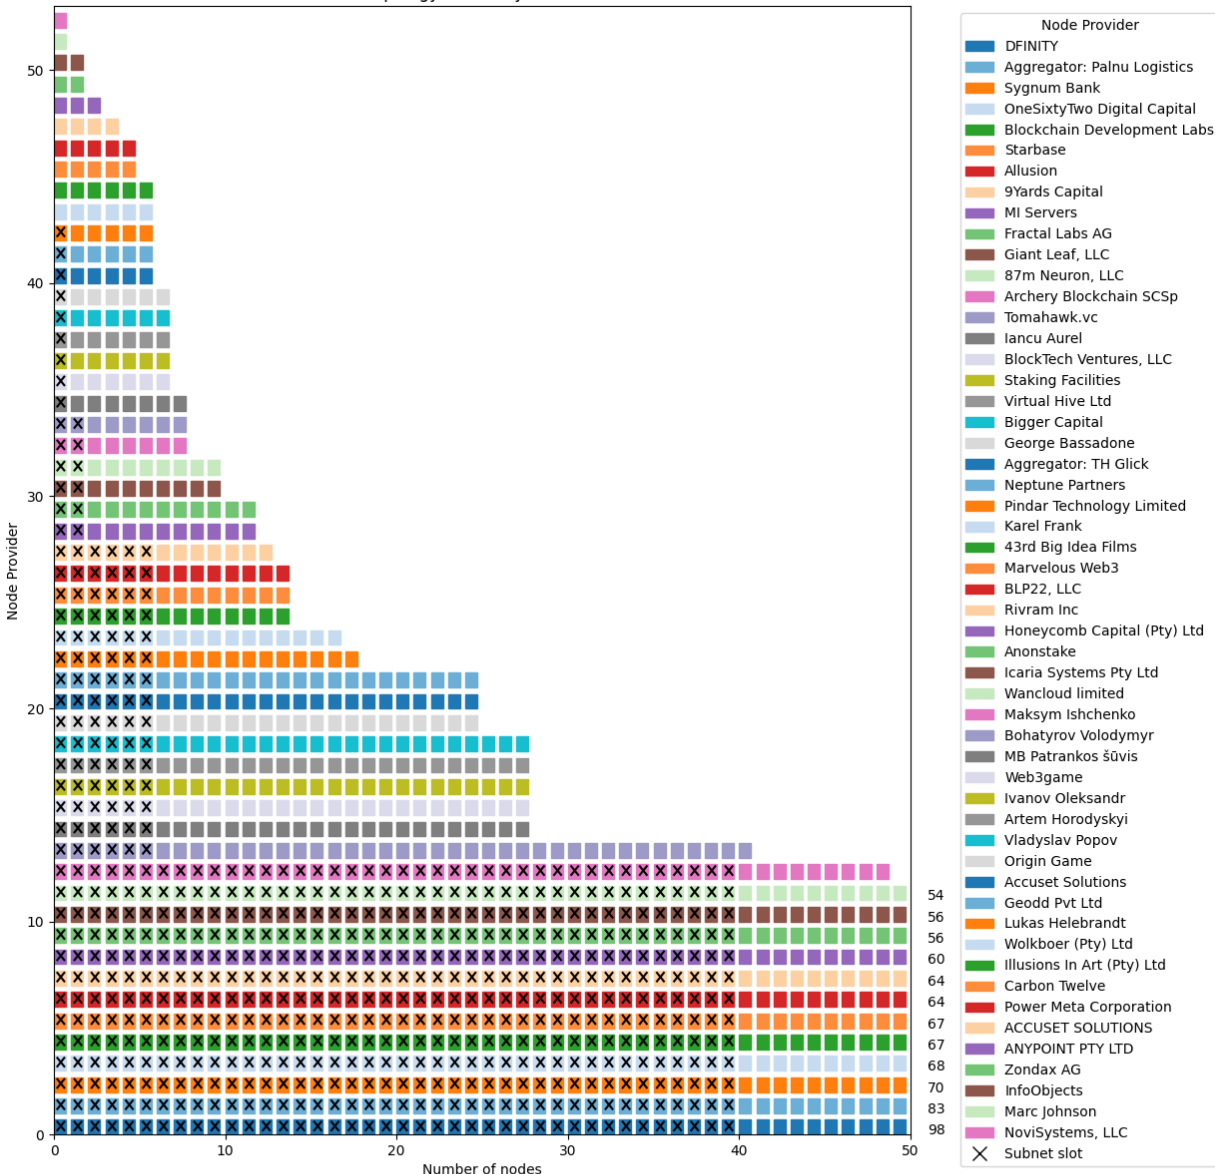

Node topology matrix by Node Provider

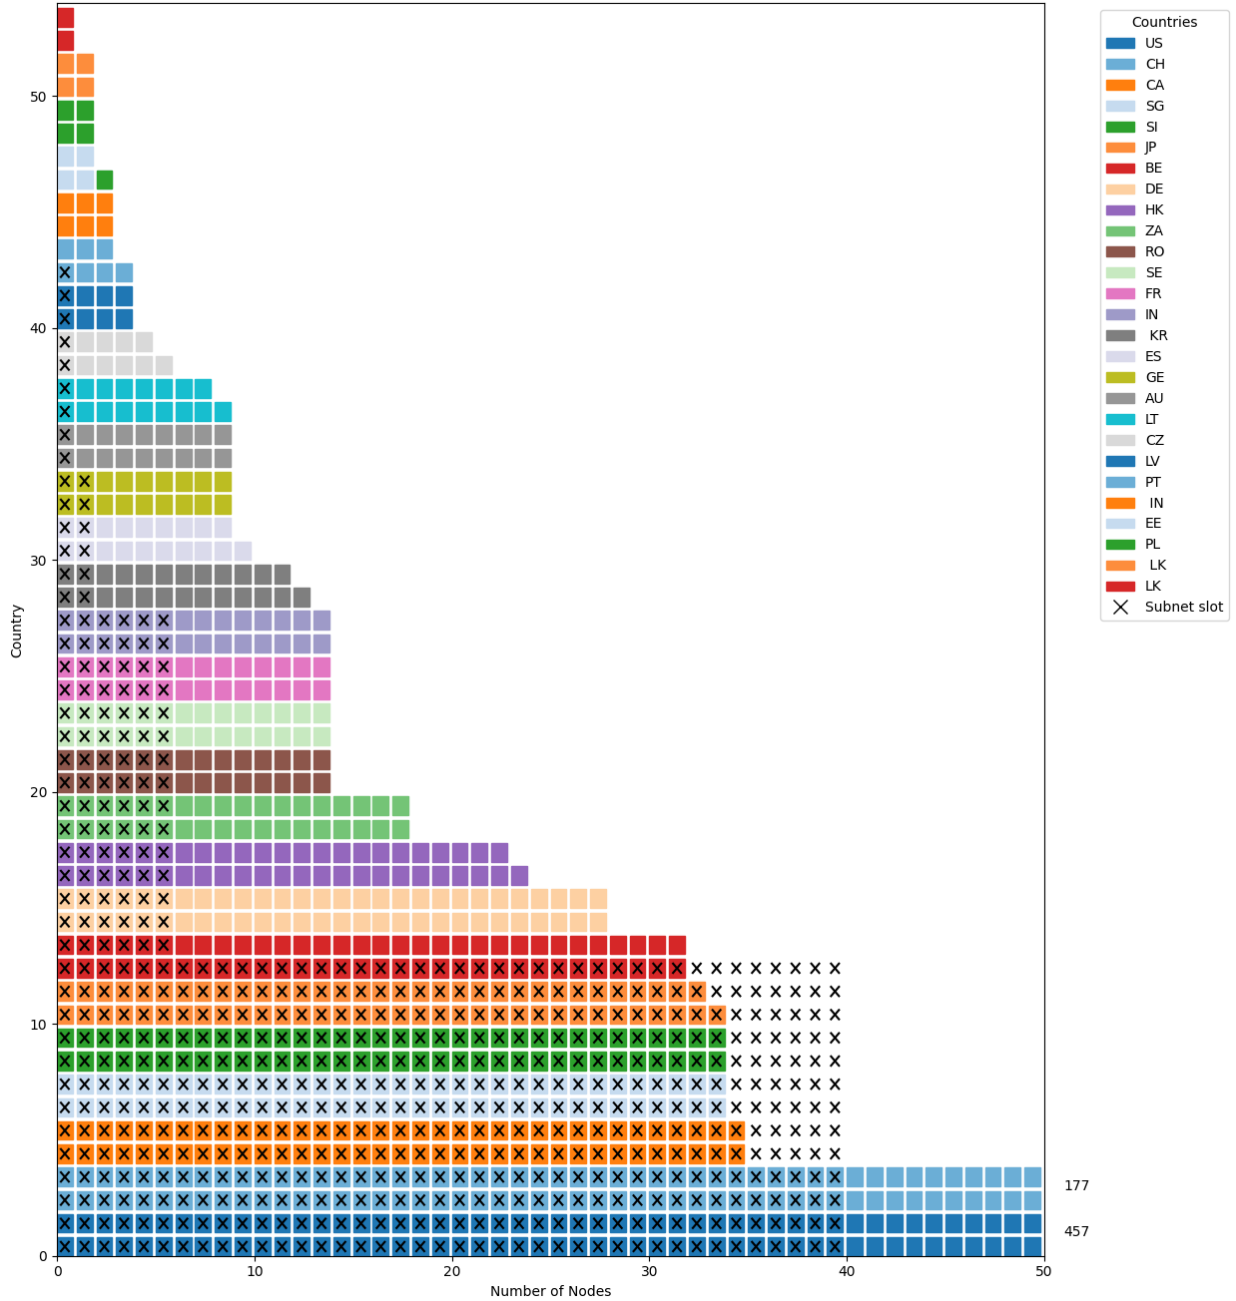

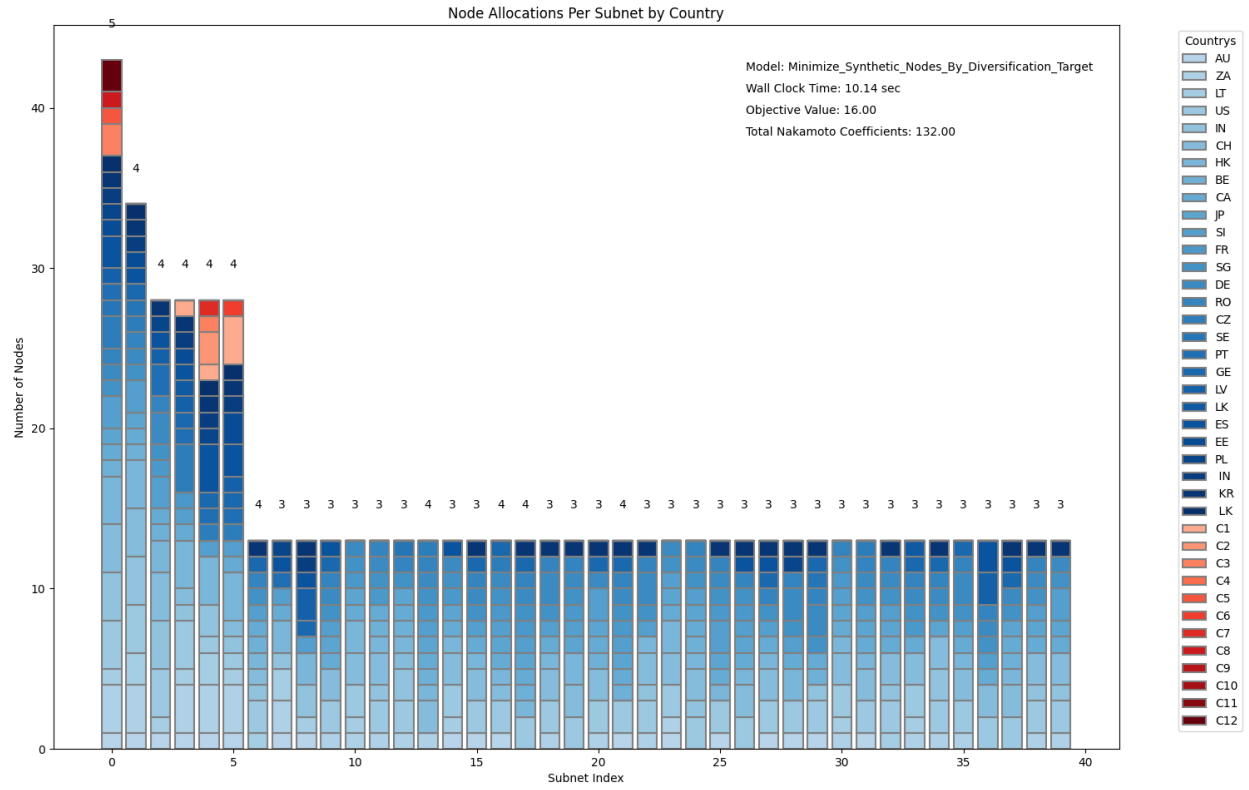

- **Barcelona:**

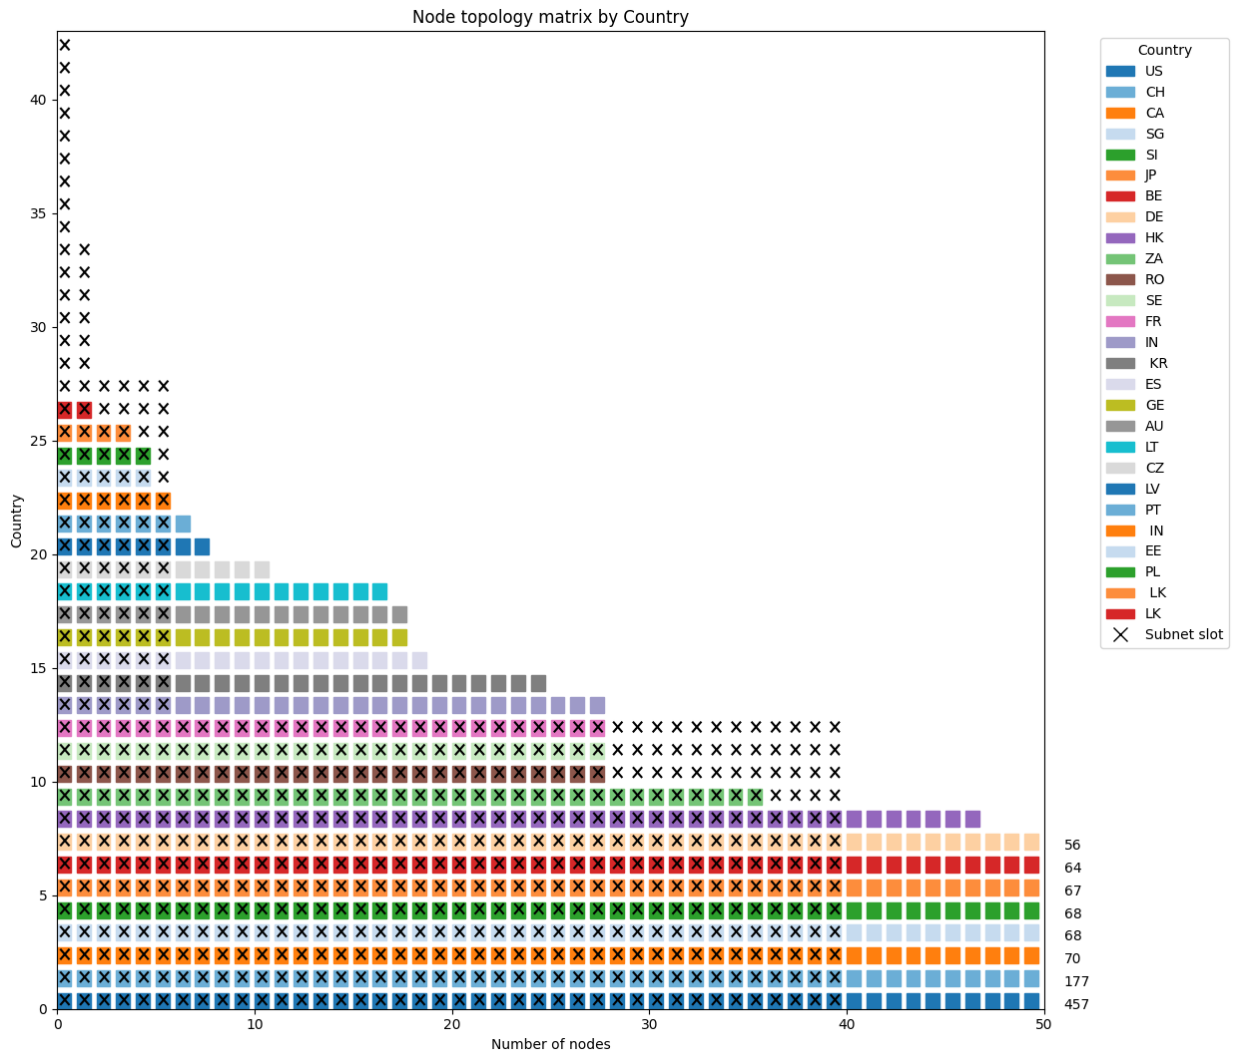

- Data center: Barcelona 1
- Owner: Adam
- Nodes: 4
- ObjectiveValue: 16

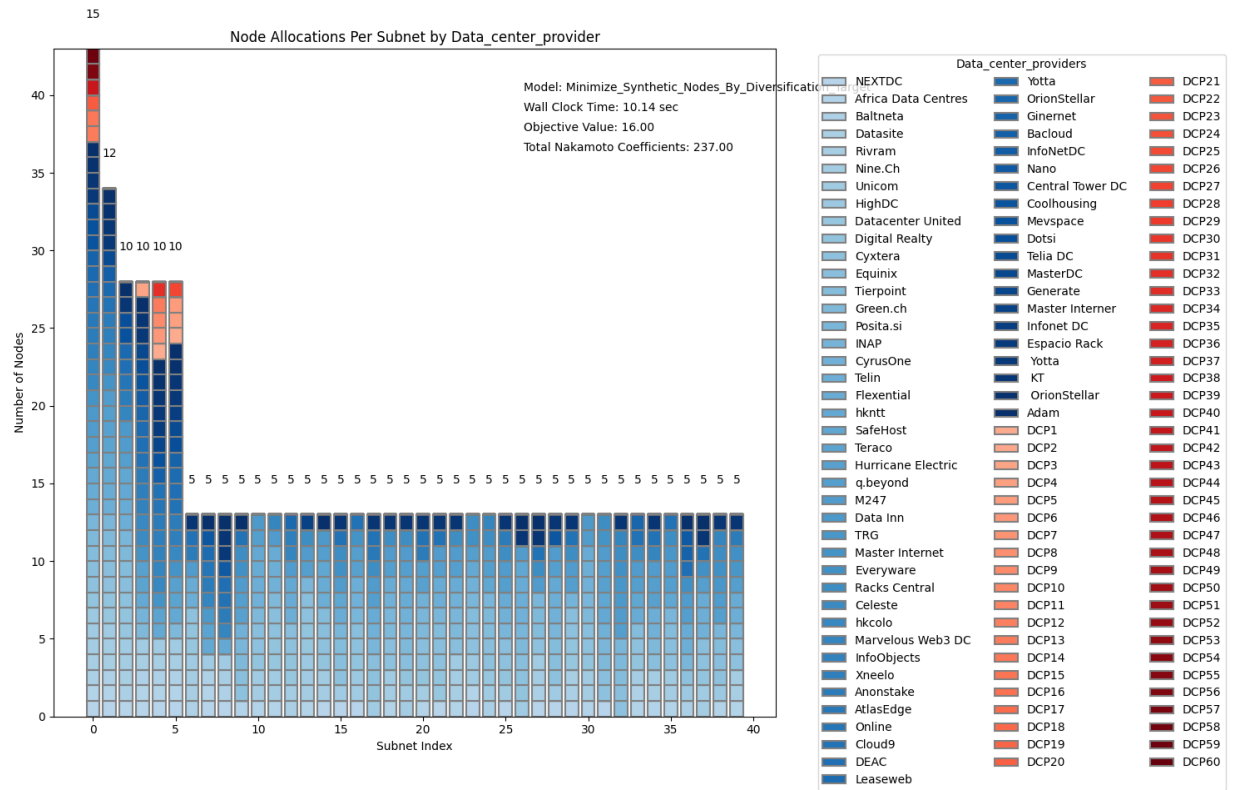

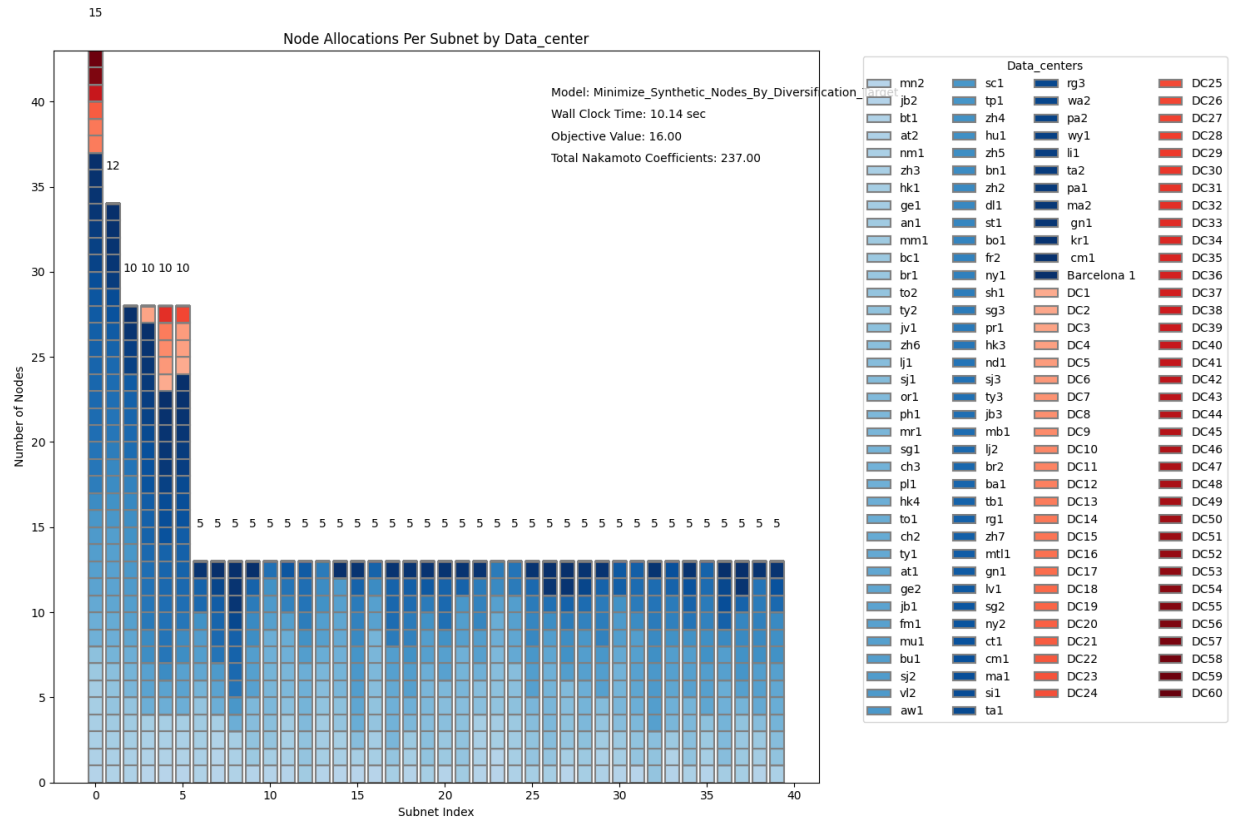

```
df_candidate_nodes = create_candidate_node_dataframe(node_provider  
='Carbon Twelve',data_center='Barcelona 1',data_center_provider  
='Adam',country='ES',is_sev=True,no_nodes=4)
```
